- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Total Habitat Cover	100

Other Site Characteristics

Auf den eiszeitlichen Schottern der Parndorfer Platte ist dies der Rest eines geschlossenen Waldbestandes, wie er noch Ende des 19. Jahrhunderts anzutreffen war. Exposition und Grundwassernähe sind die entscheidenden Standortfaktoren, die zur Differenzierung der Waldvegetation führten. Der Wald ist als Niederwald bewirtschaftet. Bemerkenswert ist der, mit Zwergmandelgebüsch geasäumte, warme Südrand des Eichenwaldes. Die stark versauerten Schotter führen zu dem, für die Parndorfer Platte charakteristischen acidophilen Trockenrasen.

4.2 Quality and importance

Obwohl nur mehr ein zerstückelter Restbestand, ist der Zurndorfer Eichenwald noch der schönste Waldbestand der Parndorfer Platte. Der Hauptanteil wird von einem *Acer tatarici*-Quercetum eingenommen. Als Eichenarten sind hier *Quercus pubescens*, *Q. cerris*, *Q. petraea* und *Q. robur* anzutreffen
